

International Seminar on Integrated
WATER-Related
Disease Control

12-14 May 2014, Norway

Sorhellinga Building
Norwegian University of Life Sciences, Ås

Reducing diarrhea in children and controlling dengue vector *Aedes aegypti* in rural schools in two municipalities in *Colombia*

Lessons learned

PURPOSE OF THIS PRESENTATION

- *Socialize lessons learnt during the project*
- *Share experiences, especially for upcoming projects applying the positive experiences and think of different alternatives for the negative experiences*

WORKING WITH MUNICIPALITIES AND DEPARTMENT

- The mayors
- Secretaries of Health in the municipalities
- Secretaries of Education in the municipalities
- Headmasters
- Teachers
- Students

We learned to interact with local actors and their political and social dynamics

- Departmental level

The Foundation is a nongovernmental institution that played an important role in the design of the project objectives in the following areas:

- *Facilitate streamlining of budget management, by providing cash for project field expenditures, e.g. transport, payments and laboratory equipment, this includes the paid for some of the professionals that were not associated with the UEB.*
- *Supported the project by providing two field technicians.*
- *Provided space for entomological laboratory, base for field staff, and storage space for project materials, e.g. hand soap and cleaning products for bathrooms.*

The University El Bosque

- *The Research Vice-rectory of the university was instrumental in assuming the payroll expenses for project professionals who were initially paid only by the project.*
- *The Research Vice-rectoy of the university further supported the project by additional funding (COP 10 million and 50 million) through separate proposals submitted to calls, which allowed the project to be extended by more than six months.*
- *Support with equipment's like stereomicroscope and phase contrast microscope for the entomological laboratory*

THE TIME FACTOR

National or internal times:

- *Establish field work time schedules at the beginning of the year, taking into account school holidays.*
- *Development of some activities needed more time than estimated, for example educational guides and KAP.*
- *Having time in 2014 assigned to databases and analysis of results is very positive, nevertheless the time was not enough to write the articles*

International or external time:

- *Establish deadlines for conference presentations and correcting posters well in advance*
 - In this case the Colombia team reviewed all material before sending to the international team for input: Sometimes the time was too short to make the suggested changes.

PARTICIPATION IN CONFERENCES OR ARTICLES

- **Short of time:** *It was difficult to carry out the various project activities and, at the same time, prepare presentations and articles.*
- **Participation in conferences :** *Permitted to know the latest trends and studies on the subject. Present the work done by the project. Establish contacts.*
- **Articles:** *Give weight to the research. They are tangible products that remain.*

WORKING IN AN INTERDISCIPLINARY TEAM

What contributes to the construction of interdisciplinary group, besides frequent reunions, is the disposition of team members to understand the look from other disciplines and to build a common language for addressing the problems.

SUSTAINABILITY OF INTERVENTIONS

- *Water filters*
- *Tank cap and netting*
- *Tank washing*

- *Pyriproxyfen*

- *Curtains*

- *Hand washing*
- *Solid waste recollection campaign*
- *The educational intervention*

ECONOMIC ASPECTS

- *Generation of local employment: The project contracted six local people for field work. Similarly, the seamstress who sewed the curtains was also local.*
- *For the development of the project during the 4 years project, the NMBU send money to UEB. The project lost money by the exchange rate.*

SMALL PROJECTS

- *Small projects were developed simultaneously with the main project to provide additional information that was not covered in the main study protocol, supplying additional information and project outputs.*
- *Before starting a project like this it is important to define: Execution times, budget, products and authorship of articles or presentations at events.*

SMALL PROJECTS

Project Name

Student/Responsible

Relación entre la presencia del mosquito *Aedes aegypti* vector del dengue y variables climáticas temperatura, precipitación y humedad relativa en escuelas rurales de los municipios de Anapoima y La Mesa (Cundinamarca), Colombia

Manuel Obando Peña/ Víctor Alberto Olano y Juan Felipe Jaramillo/ **Bachelor Project**

Nutritional situation among children in the rural schools

Sandra Vargas, Gilma Rodríguez y Edgar Ibañez

Determinantes de la transmisión del dengue: zonas rurales

Melissa Caycedo Dajud / Sandra Vargas / **Bachelor Project**

Differences in *Aedes aegypti* production and domestic water container characteristics in urban and rural areas in Colombia

Hans Overgaard ,Víctor Alberto, Olano y Juan Felipe Jaramillo

Detección de los cuatro serotipos de dengue a partir de mosquitos *Aedes aegypti* recolectados en área rural de dos municipios de Cundinamarca, Colombia

Rosalía Pérez/ Instituto Virología UEB
Victor A. Olano / ISA UEB (Field Work)
