Learn about life on earth – on the grand scale.

B.S./M.S. program* in Geological and Environmental Engineering

Planning | Materials | Energy | Risks | Water | Soil remediation

* taught in French

2014 – 2015

www.lasalle-beauvais.fr
Why should you become a geological engineer?

You have a natural flair for geology. With field experience starting your first year, you will be trained to solve specific soil and natural issues in France and internationally. What sets us apart?

A teaching approach where learning does not systematically start with theory. You will learn to use observations to draw conclusions from your experiences, research and field work. With the help of our team of research lecturers and professionals, you will learn how to react to and resolve issues for businesses that work in sectors focusing on raw materials, renewable and fossil fuels, land planning or the environment.

Hervé Leyrit,
Head of the geological engineering program

Nicolas Pelissier,
Class of 2007
Head of Operations Geology - TOTAL Angola

"I've been interested in construction since I was a little girl. I was hired after the internship I did during my fifth year and today I work in a research center on several infrastructure and transportation projects (highways, tunnels, etc.)." 

Marie Targosz,
Class of 2017
Research engineer - EGIS

"I've been interested in construction since I was a little girl. I was hired after the internship I did during my fifth year and today I work in a research center on several infrastructure and transportation projects (highways, tunnels, etc.)." 

Audrey Picard,
Class of 2014
Assistant geologist - TOTAL Angola

"Thanks to the LaSalle Beauvais international network, I was able to study abroad in Canada during my first and fourth years and in Columbia during my third year. I found these experiences gave me a real advantage in the professional world."
