If you choose to write your master’s thesis within the field of Agroecology, the following opportunities are available to you:

You can choose from a wide range of topics for your thesis project. You can pick a topic yourself based on your own interests, or you can subscribe to a project. Possible projects to choose from will be available at the NMBU faculty website, under Agroecology.

You have the opportunity for travel funding if this is necessary for the execution of your project. This will vary according to your needs, but will be somewhere in between 5.000 - 10.000 NOK.

You can travel anywhere you want in the world. There is no limitation as to where you can do agroecological research. As mentioned, there is a possibility for travel funding, but this funding is not country specific. The opportunities are many!

The Agroecology programme is multidisciplinary, holistic and systems thinking. Thinking about the whole, and how things are linked together is crucial in determining your research objective. There are plenty of opportunities, and a number of topics to choose from. Here you can see what some former Agroecology student have written about:

- Kevin Morin [Agroecology on the ground in Telangana, India](2016)
- James Douglas [Colorado cannabis : soft systems analysis of an emerging industry](2016)
- Erin Ball [Taming nitrogen : recognizing N2O emissions in fertilization practice](2016)
- Léa Vereecke [A sociological approach to crop diversification](2015)
- Laurent Moussier [How do Danish organic farmers use agroforestry system to improve the distribution of laying hens : a case study on seven farms](2015)
• Camille Nollet Cultural factors influencing farmers' perceptions of agriculture and biodiversity: case study of a rural area in South-East (2014)
• Eva Martina Brod Combined Waste Resources as NPK Fertiliser: Results from a Pot Experiment (2012)

For more former thesis papers look here.

What you have to keep in mind when choosing your master’s topic is that your main supervisor needs to be from NMBU. It will also be beneficial to have your main supervisor be from your study programme, but co-supervisors can be from different departments and programmes.
