# Machine Vision & Deep Learning

...revolution...

**ImageNet Large Scale Visual Recognition Challenge:** the introduction of deep learning algorithms into the challenge reduced the top-5 error by 10% in 2012. Every year since then, deep learning models have dominated the challenges. In 2015, researchers trained very deep networks that **surpass human performance**.

# Machine Vision & Deep Learning

# Machine Vision & Deep Learning

# Students as a resource

2015 – 3 people/1 robot

2016 – 2 people/2 robots

2017 – 11 people/13 robots

2018 – 36 people/ 23 robots

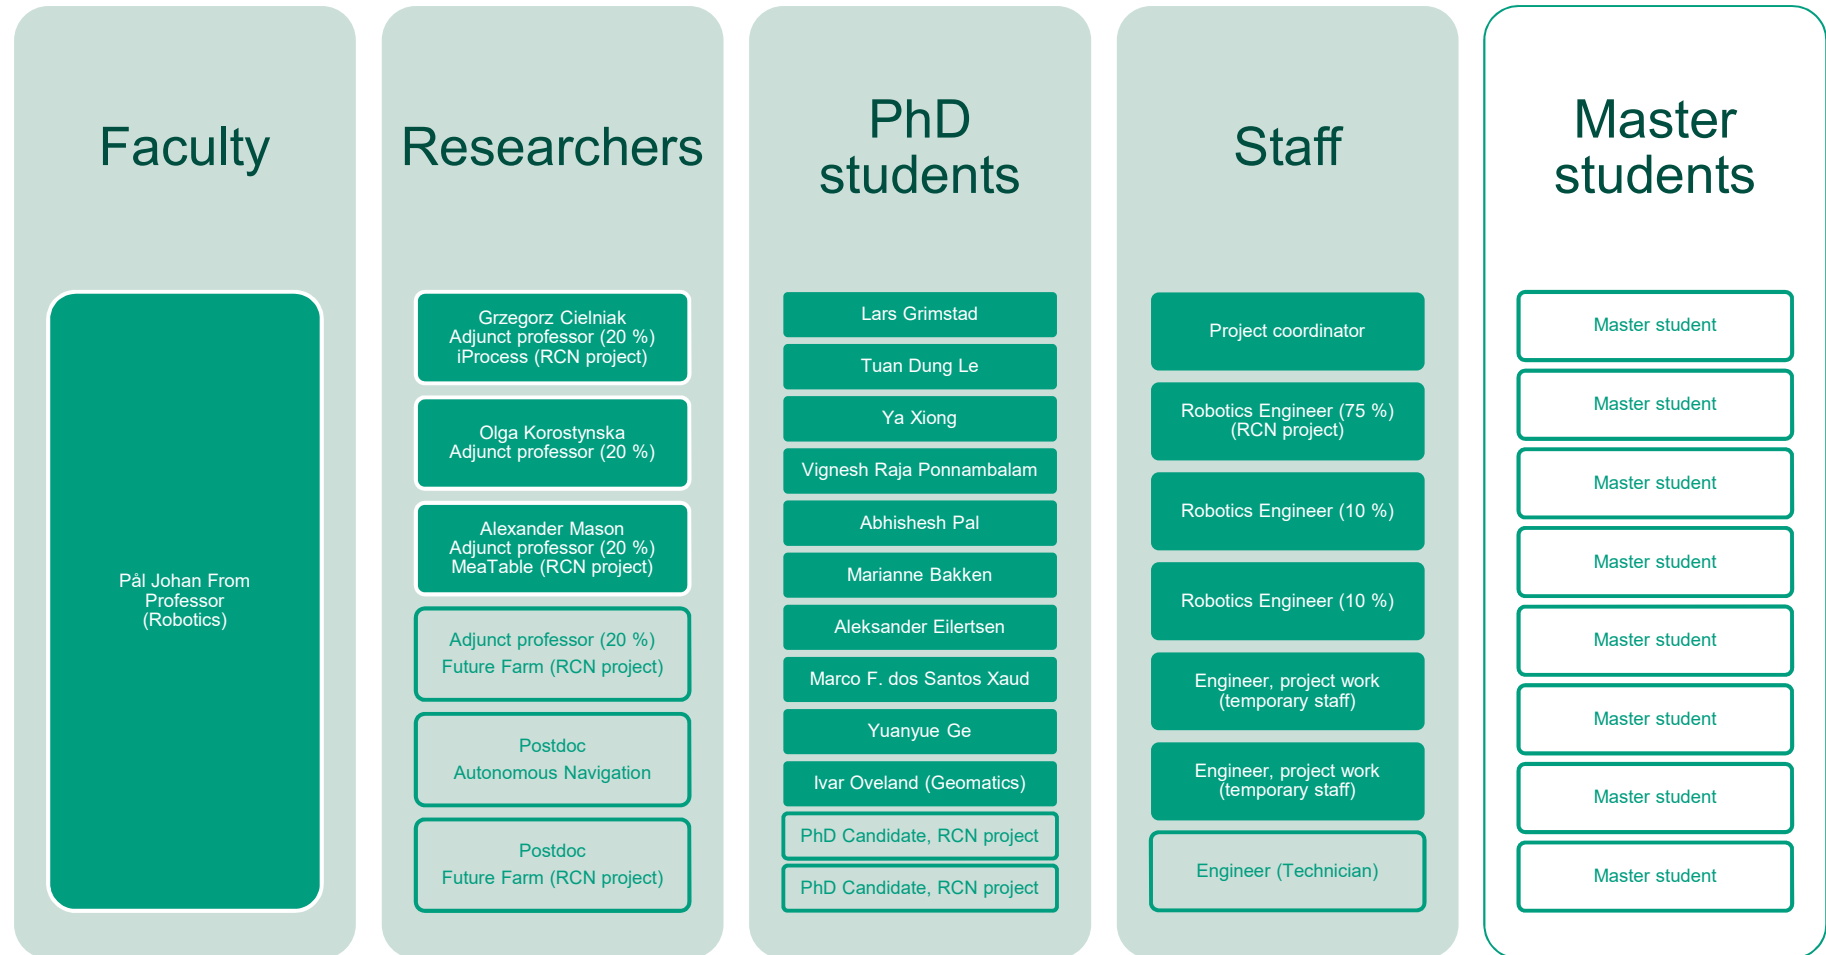

# Students as a resource

# Student project 1

## Thorvald

20-30 master students

A: Battery enclosure  
B: Drive module  
C: Steering module  
D: Suspension module

# Thorvald

# Thorvald

# Student project 2 - Manipulator

# Student project 3 - Harvester

# Student project 3 - Harvester

Obstacles and picking path planning

Based on 3D point-cloud, detect obstacles  
and select the best path

# Failure Cases

# Student project 4 - Greenhouse

# Student project 4 - Greenhouse

# Student project 5 - UMOE

## UTFORSK – 4 år, 2 MNOK

- Årlige workshop'er i Norge og Brasil
- La studentene delta forskning
- Industriadrevet

## Autonomous Monitoring Robot

Operates between cane rows  
Advanced sensors for monitoring  
weed and disease outbreak

- Camera
- Laser
- IR camera
- Geotagging

## Maintain field ridges free of weeds

- Precision herbicides
- Greatly reduced field weed intrusion

# Student project 6 - Gras

# Conclusions:

Use technology to get students involved

Let them work in teams

Physically located in the lab

Tightly integrated with the group

# Thanks
