

Topic/Title

Bruk av vitamin/mineral-tilskudd i norsk husdyrhold.

Topic/Title

Use of vitamin/mineral supplements for farm animals in Norway

Summary

A survey on the use of vitamin/mineral supplements. To what extent is it used, for what animals, in what periods, what kind of supplements (powder, pellets, blocks, lickstones, bolus, etc). It would be interesting to study some farms in detail where deficiencies or reduced production/fertility is the case and see what can be achieved by use of supplements.

The study must be supported with literature. When do we see an effect of supplementation at higher levels than the minimum requirements?

Subject area

Requirements, beneficial effects, toxic levels, ways of administration
