

Topic/Title

Råneslakt – fornuftig sortering på slaktelinja etter rånelukt og smak

Topic/Title

Entire male carcasses – sorting carcasses based on the boar taint parameters

Summary

Using entire male pigs for meat production are positive in several ways. They are more efficient, lean and contribute to a healthier fatty acid composition for human consumption. The main problem is the development of off-flavors and off-odor, so called boar taint. How can a slaughterhouse sort efficiently and use boars for highest economical value?

Subject area

- Entire male pig production
- Production efficiency
- Practical solutions

Language thesis

Norwegian preferably

Bachelor or Master thesis

Mainly master

Credits

30-60

Bachelor or Master thesis BIOVIT 2021/22

Project/company

Part of the FoU project Boars4all, collaboration between Norsvin, Animalia and Nortura
