

**Topic/Title**

Gode produkter av rånekjøtt til forbruker

**Topic/Title**

Acceptable pork products to consumer based on boar meat

**Summary**

The main goal is to produce meat of entire male pigs and use the whole carcass. Both a literature study and field work are needed to explore the challenge of using entire male pigs for meat products. Boars are efficient for meat production, but they might produce skatole and androstenone which several Norwegian consumers find unpleasant. The acceptable levels of androstenone and skatole for normal pork products. Use of consumer tests will be an important work.

**Subject area**

- Sensory
- Consumer preference
- Entire male pig production

**Language thesis**

Norwegian preferably

**Bachelor or Master thesis**

Mainly master

**Credits**

30-60

Bachelor or Master thesis BIOVIT 2021/22

**Project/company**

Part of the FoU project Boars4all, collaboration between Norsvin, Animalia and Nortura
